

The Journey of Electricity

Substations

Substations are like factories, which break down electricity into more useable voltages.

Never try to climb or through items into a substation.

Danger of Death sign

Substation name and telephone number

Substations come in many different shapes and sizes. They can either be outdoors or enclosed in a brick building. There may be a fence or wall but all substations will have a white sign detailing the name of the substation and an emergency telephone number to call. One thing they will all have in common is the yellow 'Danger of Death' sign.
